

As a subscriber to satellite radio I can attest first hand how valuable it is to have weather and traffic information "ahead" of time. I can pick up my satellite signal 24/7 from any where in the nation FOR any where in the nation. It is valuable information for planning ahead travel routes by having that information LONG before I can pick up a "local" AM or FM Station. I believe it is violating satellite radios rights to prohibit them from broadcasting this information. I would like to see NAB's petition 04-160 defeated. It is VERY counter-productive and is causing taxpayers wasted time and money. Sincerely, Ken "Casey" Casebolt
